

Customizations

Motor Home Customization

Genesis Automotive and RV has been working on motor homes and recreational vehicles for about 14 years. We are growing in our repair menu with advanced training for our technicians, keeping them on the cutting edge of RV repair. We routinely perform specialty upgrades -from generator installation to modifying the roof drainage to keep slide outs dry; installation of one piece double dome skylights in any shape and size, and a multitude of other customizations. We have a dedicated technician that specializes in electrical work such as additions of solar charging and 110volt inverter systems. Additional services include installation of LP gas additions and upgrades, and we install custom header systems and performance packages. We are one of the only shops that repair the roof A/C systems. If you have a desired custom repair please send us your request.

Automobiles
Genesis Automotive has extensive experience in building custom autos. From mild to wild, our claim to fame is a 1936 Ford Phaeton 4 door convertible that we built from the ground up. The car was built with a 350 Chevrolet engine topped with a blower, a custom built transmission that was first hand polished before assembled, and the differential was chromed and was a built 9 inch Ford Locker. In addition, we built a customized electrical system and the brakes were four wheel disc. The car was so fantastic, it made the poster car for the 2001 Seattle Hot Rod show!

Equipment/Generators
We work on equipment from gasoline powered jetting equipment to portable generators. We also repair gas and diesel tractors and various other technical equipment for our fleet customers. We also modify custom vehicles, which included modifying a mobile kitchen performing refrigeration repairs and adding a generator. For Famous Dave's BBQ, we modified one of their Dodge Sprinter catering vans with an LP gas system to operate a generator, and wired the 110 volt outlets for their warming ovens. We are an Onan generator authorized repair facility. Please contact us at (253) 473-2336 for further information or to schedule an appointment.
